TIPO MATRICE

VARIANTI RICORRENTI

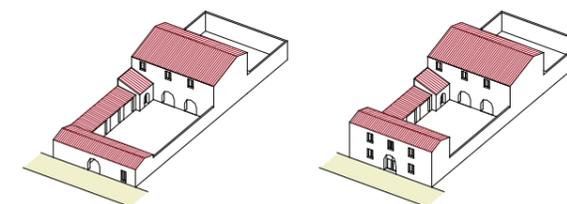

MASSIMO SVILUPPO COERENTE

posizione seriale aperta

A1

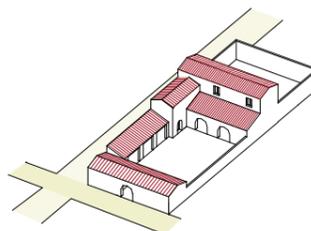

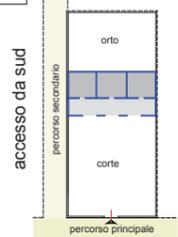

Il massimo sviluppo consiste nella elevazione anche del loggiato con la formazione di un corpo a doppia profondità consentendo dalla presenza della corte retrostante per l'affaccio, a nord, dei vani. Ulteriore sviluppo planimetrico vede la realizzazione di vani anche sul fronte strada, che spesso, aprendosi su questa, ospitano destinazioni non residenziali.

La condizione più ricorrente presenta l'elevazione del corpo principale fino a due livelli e la limitazione al P.T. del loggiato e degli altri corpi presenti, che occupano i lati dx o sx, generalmente con copertura ad una falda. Sul lato meglio iso-orientato della corte, sorge, addossato al loggiato, la cucina
